Common Sense Tactical LLC

Ballistic Shield Sling

About the BSS

The Ballistic Shield Sling is an innovative sling system that allows the weight of a shield to be distributed across the torso of the operator. This greatly extends the effectiveness of the operator while using a shield. Less fatigue equals higher operational effectiveness. The shield can be stowed on the back for transport or hands on user operations. The operator can perform weapon reloads and malfunction clearance with both hands while maintaining ballistic coverage with a shield. The BSS stays with the shield and is rapidly adjustable for size and right or left handed applications.

The BSS is made in the USA with US sourced materials. For durability and strength we have used 3,000 lb. Mil-spec webbing, Austri Alpin 15kn ANSI rated buckle, and YKK side release buckles in the construction. This system also has two patents one for utility and one for design. There is nothing like it on the market.

About Common Sense Tactical

- Veteran Owned and Operated
- Aggie Owned and Operated
- SAM.GOV: Common Sense Tactical LLC
  - UEI: HST7BJLFENX2
- VOSB & SDVOSB
- BERRY Compliant
- Founders have close to 40 years of combined law enforcement and tactical experience
