UCAR Arms to Exhibit at SHOT Show as a New Exhibitor Showcasing Advanced Steel Magazine Solutions and Controlled Manufacturing Capabilities

UCAR Arms is pleased to announce its participation as a first-time exhibitor at SHOT Show, marking a significant step in expanding its presence within the United States and global defense and firearms markets.

Headquartered in Türkiye, UCAR Arms is a manufacturing-driven company specializing in the engineering and production of stamped metal parts, tooling (dies & molds), and high-performance steel magazines. The company operates with a production facility exceeding 8,500 m² and follows a **controlled production philosophy**, ensuring consistency, traceability, and repeatable quality across all product lines.

UCAR Arms is registered with **NATO NCAGE** and operates in line with internationally recognized quality standards, including **ISO-certified quality management systems**. These certifications reflect the company's commitment to compliance, reliability, and long-term cooperation with both private-sector manufacturers and government-related entities.

With strong experience as a solution partner, UCAR Arms supports firearms manufacturers through:

- OEM and private label production programs
- Long-term supply agreements (3–5 year frameworks)
- Engineering and development of stamped components and magazine systems
- High-volume, consistent manufacturing tailored to international standards

At SHOT Show, UCAR Arms will present its comprehensive **steel magazine portfolio**, including:

MP5 Magazine Family
One of the company's core product groups, developed through direct involvement in licensed production projects. The portfolio includes:

- 10, 15, 20, and 30-round curved magazines
- 30 and 40-round straight magazines
- Ongoing development of extended capacity models
  These magazines are designed for reliability, durability, and compatibility with original platform specifications.

Glock-Compatible Magazine Series
A rapidly growing product family developed for high-demand markets, offering:

- Multiple capacity options
- Consistent feeding performance
- Compatibility with OEM and aftermarket platforms

Additional Magazine Solutions

- Shotgun magazines (AR-style platforms, multiple capacities)
- Pistol magazines for platforms such as CZ, Beretta, and 1911

- Custom and project-based developments depending on client requirements

A key highlight for this year is UCAR Arms' advanced surface treatment approach. In addition to standard **QPQ (Quench-Polish-Quench)** coating, the company introduces its **proprietary anti-friction coating technology**, designed to:

- Reduce friction during feeding cycles
- Increase wear and corrosion resistance
- Improve long-term operational reliability

This dual-layer coating system represents UCAR Arms' focus on performance-oriented manufacturing rather than standard commodity production.

With an annual production capacity reaching millions of units, UCAR Arms positions itself not only as a supplier, but as a **long-term solution partner** for companies seeking stable, scalable, and quality-driven magazine supply.

"Our objective at SHOT Show is to build strong, long-term partnerships in the U.S. market," said Mustafa Tuğrul, Sales & Marketing Director of UCAR Arms. "We are particularly focused on working with distributors, wholesalers, and OEM manufacturers who value consistent quality, engineering capability, and reliable supply chains."

UCAR Arms welcomes distributors, OEM partners, and industry professionals to connect during SHOT Show to explore cooperation opportunities.
