BOOTH 51322

LAS VEGAS, January 2027 — Finishing Rx, a supplier of metal finishing equipment, media and process support for firearm and ammunition manufacturers, will feature metal preparation for bake-on ceramic coatings at booth 51322 in the SHOT Show 2027 Supplier Showcase, held Jan. 18–19, 2027, in the Palazzo Ballroom on Level 5 of the Venetian Expo in Las Vegas.

A bake-on ceramic coating is only as good as the surface under it. At the booth, the Finishing Rx team will walk through two different prep processes, airblasting and shotblasting, and help each shop choose the right method, media and equipment for its parts and throughput.

Airblasting with 10X media: Finishing Rx distributes 10X Engineered Materials superoxalloy blasting media, including EpiX MP, for airblasting in blast cabinets and blast rooms. 10X media leaves a clean blast profile with minimal media embedment, which makes it well suited to coating prep on barrels, slides, receivers and suppressor parts.

Shotblasting with metal media: Shotblasting is a separate process that uses metal media, such as steel shot, steel grit and stainless blast media, to prep parts in production volumes the same way every time. Finishing Rx supplies shot blasting equipment and the metal media to run it.

Manufacturers are also invited to bring a sample part to booth 51322 for a free process recommendation, whether the job is blast prep for bake-on ceramic coatings, deburring, or cleaning and polishing brass cases.

Sister company Ammo Rx, which provides ammunition manufacturing equipment and project management, will exhibit at booth 51324.

SUPPLIER SHOWCASE HOURS (PACIFIC)

Monday, Jan. 18, 8:30 a.m.–4:30 p.m.; Tuesday, Jan. 19, 8:30 a.m.–4 p.m.
