Long Range Wireless Camera Systems

BuckEye Cam Brings USA Made, Long-Range Wireless Surveillance Technology to SHOT Show 2027

ATHENS, OHIO — November 2026 — BuckEye Cam will showcase its American-made, long-range wireless camera systems at SHOT Show 2027 in Las Vegas, Nevada.

Originally developed for serious hunters, BuckEye Cam has grown into a trusted provider in 28 countries Worldwide of remote monitoring and surveillance technology for law enforcement, military, border security, and tactical operations worldwide. Its systems also serve hunting, wildlife research, conservation, asset protection, and commercial applications.

Long-Range Wireless Technology Without Cellular Limitations

Unlike conventional cellular trail cameras, BuckEye Cam systems operate on a dedicated 900–928 MHz frequency-hopping radio network, transmitting images over distances of several miles without requiring cellular service or internet connectivity at individual camera locations.

Each camera can also function as a wireless repeater, extending network coverage across challenging terrain and large surveillance areas.

The X80 Series, geared toward tactical scenarios, includes X80 BT, X80 DL, X80 Thermal camera, X80 Echo, and X80 Remote IR Flash. The X80 LITE Series, best suited for hunting, ranches, outfitters, researchers and many other markets is offered at an attractive price-point. Multiple base station options provide flexible setup and remote access capabilities.

American-Made. Field-Proven. Built to Perform.

Designed and manufactured in Athens, Ohio, BuckEye Cam systems deliver dependable performance in demanding environments, from tactical surveillance and border security operations to remote hunting properties, wildlife research, and critical infrastructure protection.

Visit BuckEye Cam at SHOT Show 2027 to learn how our long-range wireless technology can support your surveillance and monitoring needs.
