### Farwell

The Farwell has plus sized 2.8" tires for ultimate mountain bike versatility. With a 120mm fork, short chain stays and relaxed head angle it rips single-track and flies down flow trails. Adaptable, the Farwell is capable of switching from 27.5" to a 29" wheel to go from fun trail bike to a fast cross country machine. The build is purposeful: long top tube, short stem, boost 148 x 12 with thru-axle, and internal dropper post for great fit, feel and handling.

### Baxter

The Baxter is designed from the ground up for adventure. The Baxter is a multitasking handbuilt ti machine suited for either drop or straight bars and compatible with a rigid or 100mm suspension fork. The frame optimizes features from both the gravel road and mountain bike worlds. Like its namesake, Moots' resident Chocolate Lab, Baxter will be your loyal cycling pal for life. Suggested tire: 29" x 2.0" / max tire 2.25".

### Vamoots Disc RSL

The Vamoots Disc RSL is durable, lightweight, stiff, and sleek designed for pure road performance with modern disc brakes. The frame features state-of-the-art 3D printing technology to integrate a 3D-printed dropout that ties in the new flat mount disc brake mount, an internal electronic wire "tunnel" and a 142 x 12 thru-axle providing increased stiffness for quick acceleration, tight handling, and a smooth balanced ride.

### Finishes and Decal Colors

With the introduction of the polished and blasted finish option, there are more ways than ever before to customize a Moots frame. Available on all Moots models and during the frame refinish process, this multi-step approach ultimately brings a chrome-like surface appearance on the frame where decals would normally be located. Additional finish options include: polished with engraved head tube, etched with or without engraved head tube, classic satin bead blast, and paint ready. New decal color options include solid green, red, or blue which can be matched with anodized seat collars, stem face plates and seat post side plates.

### Psychlo X RSL now with Flat Mount

Our flagship cyclocross crusader will now come standard with thru-axle and a flat mount 3D printed dropout along with an integrated electronic wire "tunnel" in the chain stay. Bringing the disc caliper inside the rear triangle provides a clean appearance and continues the smooth line of the frame. Mr. Moots is printed on the dropout for an unmistakable look.
