

## Introducing the new PHE/PHC models from PATLITE: Now With USB Connectivity

TORRANCE, CA – PATLITE (U.S.A.) Corporation, a leading manufacturer of LED indication devices, today announces the newest versions of its PHE and PHC series of interface converters, now available with USB and serial RS-232C connection capabilities and option of USB bus power or DC24V input with an AC to DC power adapter. Both series can be used to further visual and audible indication, by taking commands and displaying information on smaller machines and devices such as personal computers, printers, self-checkout machines, medical machinery, scanning and logistics equipment.

The PHE series features a standard three stack, red, amber, green signal tower with two flashing patterns that are independently controllable. There are four built-in alarm sounds that can be controlled with sound levels up to 80 dB (at 1m).

The PHC interface converter has eight separate output contacts that are independently controlled. It can be programmed to be used with external indication products such as PATLITE's revolving lights, signal towers, or MP3 capable audio products. A screwless terminal makes it easy to wire.

Both the PHE and the PHC can be easily programmed with ASCII commands that can be sent via the USB or RS232-C connections. They also feature a reset button for local alarm acknowledgement.

"The PHE signal tower and PHC interface converter can be used when indication is needed on PC based equipment," said Paul Mizuki, PATLITE's Marketing Manager, "It is a great alternative for those that do not wish to or cannot program their indication device via a PLC."

The PHE and PHC models can be used in a number of applications for indication purposes. Application examples include: RFID scanners, barcode readers, medical equipment, and retail self-checkout systems, among others.

### **ABOUT PATLITE**

Founded in 1947, PATLITE is a leading provider of innovative LED status indicating lights, sound alarms, visual and audible communication network systems and solutions which enhance the safety, security and comfort of workplaces and communities.
