

## Introducing the PFH Signal Light Series From PATLITE: Portable Indication for Temporary Applications

TORRANCE, CA – PATLITE (U.S.A.) Corporation, a leading manufacturer of LED indication devices, today announces the release of the PFH signal light series, its first portable, battery-operated LED signal light. The PFH signal light series is equipped with durable and environmentally friendly high-performance LEDs, and has a shock resistant polycarbonate dome available in two colors – red and amber. The signal light is equipped with a magnetic base, allowing for temporary and secure sideways mounting on metal surfaces.

“With the PFH, you are free of wires and the worries of relying on central power,” said Ken Kosaka, PATLITE’s General Manager, “It can be positioned wherever indication is needed most at that time, and can be easily removed once the task is completed. The PFH will never be compromised by a power outage, or take up room when it is not needed.”

The PFH has two distinct flash patterns and lighting modes. The signal light can be put into “Power mode”, which emits highly visible illumination for immediate caution, and can be run for up to 24 hours. It can also be put into “Eco-mode” which can be run for up to 100 hours when prolonged operation is necessary. Both lighting modes operate in either single flash or double flash patterns. One unique feature of the PFH signal light is that it does not lose visibility or flicker as the batteries are drained. The visibility is maintained until the very end, when the user is alerted with six consecutive flashes that the batteries need to be replaced with four “AA” Alkaline dry cell batteries.

Other key features of the PFH include:

- Dust proof, water resistant, IP55.
- Conformity Standards: RoHS (EN 50581), EMC Directive (EN 61000-6-4, EN 61000-6-2)

Applications for the PFH range greatly, and can include: being used as a caution light during equipment maintenance in a factory, for warning applications in construction sites, or to indicate temporary area closures, especially when the main power supply is unavailable or compromised.

### **ABOUT PATLITE**

Founded in 1947, PATLITE is a leading provider of innovative LED status indicating lights, sound alarms, visual and audible communication network systems and solutions which enhance the safety, security and comfort of workplaces and communities. The company’s products and services help improve the quality control, productivity, and safety of industrial automation, commercial, municipal and governmental customers. PATLITE has more than 600 employees and has wholly-owned sales subsidiaries in the USA, Germany, Singapore, Korea, Taiwan, and China.
