InnoLas Solutions opens customer application and R&D center in Gilching/ Germany

InnoLas Solutions GmbH, a leading German laser equipment company for micro material processing and laser engineering, has opened a new customer application and R&D center in Gilching, Germany in July, 2017.

Richard Grundmüller, founder and president of InnoLas Solutions comments: “Due to the growing demand in customer application development and our own R&D activities we invested a total of EUR 3 Mio. in our laser applications center.”

The laser application center is designed to process different applications in crystalline solar cells, ceramic components, pcb-substrates and other brittle materials such as glass or sapphire.

“Our application center is equipped with industrial-grade InnoLas Solutions equipment and a broad spectrum of high end ultra-short pulse lasers, a variety of multi-axis stages, fixed and galvo based beam delivery systems. In addition to that diagnostic instruments are used for process control and measurement of the final sample”, says Dr. Rico Böhme – Head of Application Development at InnoLas Solutions.

The application center is located at Dornierstrasse 4 – 82205 Gilching/ Germany.

About InnoLas Solutions GmbH

InnoLas Solutions GmbH produces tailor made laser systems for micro material processing, particularly for the semiconductors, electronics and photovoltaic industry. The German company designs and manufactures machinery solutions as stand-alone systems or inline integration, perfectly adapted to industrial production conditions. Worldwide service and support ensures smooth setup and reliable operation. InnoLas Solutions utilizes innovations in laser technology to produce highly-efficient and reliable processing systems.
