

BUILDING ON SUCCESS!

We have formed two new companies in order to strengthen our market presence.

We now have 20 horizontal wet process lines installed in the UK and have established a good reputation for supplying quality wet process solutions at attractive prices.

Our partner Wet Process Solutions has done a great job in getting our wet process lines recognised and respected.

We and our colleagues at WPS feel the time is right to celebrate our successful working relationship by strengthening our offering with two companies each with specific goals.

Circuit Tech Machinery Ltd

This will in effect replace Wet Process Solutions Ltd for equipment sales and service in the UK market. Managed by Jeff Cox who is ably assisted by Installation Engineers Derrick and Chris Walters.

Circuit Tech International Ltd

As well as sales support for the UK market CTI will be busy building on early successes in the American and Indian markets and looking to take our popular low cost model into the European market. Also appointing support partners in these markets. This is being kicked off by our attendance at IPC APEX 2020 Booth no. 4418. We will be exhibiting an ammonia etching line for outer layers.
