January 2021

Smart Sonic

The ErgoSonic Model Stencil & Pallet Cleaner is the first fully automatic, programmable and ergonomically designed front-loading ultrasonic stencil cleaner. It is recommended for users desiring full automation while cleaning less than 20 stencils or pallets per day. Front-loading eliminates lifting stencils and baskets over the tall wash tanks and eliminates steps and loading platforms.

In addition, the sealed process chamber prevents odors from being emitted and protects the operator from contact with wash solutions. Wash and rinse cycles are completed in a single process chamber.

The basic operation is straightforward. The operator loads the stencil into an empty chamber and selects the desired cleaning profile. The wash solution is uploaded to the wash chamber from a built-in reservoir and downloaded through a filtration system to the same holding reservoir after the wash cycle.

The stencil is then spray rinsed and the cycle is complete. The total wash/rinse cycle time is approximately 10 minutes. When the cleaning cycle is complete, the stencil is then removed and placed in the optional drying rack. Stencils are heat-sensitive and should NOT be dried using elevated temperatures. The ErgoSonic
