# *Press Release*

**NORTH STAR**  
by **impex**

## **IMPEX launches a line of “stack preparation” equipment.**

For many years **Impex** has been a strong partner of Burkle and Schmoll, offering a comprehensive line of measuring solutions for the printed circuit board industry. As the trend moves more towards “automated material handling” for the industry, **Impex** is now offering a line of “Stacking Solutions” to improve the preparation and handling of panel stacks. This takes the products formerly offered by **North Star** and integrates them into the Impex portfolio of precision equipment.

Products range from the simple, manual pinning, taping and stacking units, to the very sophisticated, semi-automated Dual 2000 that incorporates all these functions in one unit.
