

# Infoplus goes to market

Born out of a 3PL with over 35 years of experience, Infoplus recognized the need to meet elevated expectations of today's customer. In recognizing that need, Infoplus has built a powerful cloud-based software platform for eCommerce businesses that streamlines product fulfillment from shopping cart to the truck. Handling Inventory, Order Management and Shipping - all optimized through one powerful hub.

Thanks to several early adopters, Infoplus has been able to perfect the application in a live working environment. Now, Infoplus is available to all companies in the business of fulfilling orders. From established businesses, to those needing to scale operations for rapid growth, Infoplus ensures that inventory is accurate, orders are picked and packed efficiently, and the product makes it to the customer on time - every time.

Infoplus Founder and CEO James Maes, along with the Infoplus team, has gone to great lengths to ensure that this software gives you everything you need to grow your business with minimal trauma to your employees and operations, and maximum impact to your bottom line.
