

ENGINEERING PARTNERSHIPS DESIGNED TO BUILD VALUE

LOWER COSTS

SHORTER SCHEDULES

REDUCED RISK

DESIGN FLEXIBILITY

SidePlate is your partner for optimized steel buildings. On both seismic and wind-governed jobs, our designs are more efficient than other moment frame systems, and we can often design an open-floor, moment frame building that has a constructed price similar to a braced frame design.

We developed the first SidePlate connection more than 20 years ago out of a necessity for improved seismic performance. Although many things have changed since then, our desire to innovate has remained consistent. Contact us to see how we can help you build value into every design.
