

Excellence in Industrial Nesting Software Since 1975

**"We have a Cutting Solution for any Budget
& Every Machine... Contact us Today!"**

BUILT BY PROFESSIONALS FOR PROFESSIONALS

"Designed with Productivity in Mind"

One of the more important things to consider when purchasing new nesting software is whether or not it improve your productivity. Will you be able to import the part files quickly, apply the tool path properly, and nest them efficiently without taking a lot of time to manually adjust the tool path or the nest.

Shop Data's version 4.2 does all of that and more. With our new user interface that allows you to set up your screen with exactly what you need to see and where you want it to be on the screen. Power users can even use two monitors for maximum productivity.

Shop Data has the specialized modules for your company no matter what type of work you do, regardless of whether you are running plasma, laser or waterjet. Whether it be a garage shop doing artwork and signs, general fabrication, general fabrication with the occasional industrial fitting job, small shop HVAC duct fabrication or a full blown HVAC duct fabrication sheet metal shop including roof curb adaptors, or specialized processing machines with drills, taps, milling, and even beveling, we can help your shop improve its productivity.

Our QuickCAM Pro package is what you need for general fabrication. With part file import, tool path application, and advanced shape nesting. For the occasional industrial fitting job add our Bench module for the industries most used fittings. QuickCAM Pro with tools will allow you to add drilling, tapping, counterboring, and even end milling. Add our beveling module and you have the software you need to effectively maximize the return on your significant machine tool investment. Are you a structural shop running connecting plates or base plates? Our specialized EdgeStart™ Nesting engine will maximize your material yield and minimize your consumable usage. Our QuickDuct CAM master software package has the industry's most comprehensive fitting library along with the reporting and labeling needed to effectively process your duct fabrication job. Add our Roof Curb adaptor package to take advantage of every opportunity your shop comes across. Have a small machine in your garage? Our basic QuickCAM software package is what you need, add raster to vector conversion to allow you to take any image file and clean it up so you can cut it with your plasma table.
