

Metal Finish Equipment & Supply Co., Inc.

SINGLE PASS CLEANING

Previously used and painted cylinders to be blasted *above* move through a screw roll blast cabinet and are cleaned to specification in one pass.

AMERICAN MADE

**We'd love to talk
blast cleaning
with you.**

Pass Through Shotblast Systems

Structural shapes, plates and manufactured components are cleaned by passing through the blast chamber on roll conveyors, monorails, skew roll conveyors or on work cars. Prefabrication or post fabrication parts are effectively cleaned in an automated pass through line.

The Right System

Pass through blast systems are designed around the parts that need to be cleaned and the complete production line. Designed to work with an existing or planned production line. We work with your team to design and build the most effective solution for your facility through a complete analysis of your parts and production system.

The MetFin line of pass through systems are designed to integrate into existing or planned work flow systems.

Monorails

Systems you will count on to be trouble-free, durable and easy to maintain. Operators will realize increased output, successful production runs and reduced costs.
