About us

País textil is the trademark of Cumpi Camayoc (master weaver in Quechua) a company dedicated to the development of handicrafts in Peru. We design and implement social development projects in crafts and manufacturing, in rural and urban areas, as part of Corporate Social Responsibility Policy funded by solidary companies.

Marta Castaneda, collector of folk art, founded Cumpi Camayoc in 2011 after working on development projects with Artisans for 6 years.

She and her sister Sandra, a product designer and stylist, joined a year ago, to create País textil, in order to market the products they designed, and are produced by artisans working directly with Cumpi Camayoc.

Our main goal is to support the production and business development of the groups of artisans we work with and get fair prices for their work, but also to recover and foster ancient techniques of textile weaving and enhance the value of traditional Peruvian handicrafts, promoting the use of first-class materials and contemporary designs, inspired by the textile living culture of Peru.

Who we work with

Tejedores de Cajamarquilla: a group of men and women living in the outskirts of Lima, in the vicinity of the Archaeological complex of Cajamarquilla. Our project focuses in the rescue and preservation of pre-Columbian textile techniques and generating a profitable business in fine craftsmanship

Llampu Maki, our latest project formed by a group of men and women living in the vicinity of the archaeological complex of Caral, we work in the recovery of prehispanic techniques in hand-woven textiles and also knit products with ecologically grown cotton in natural colors.

We also work with women artisans, weaving on backstrap looms in the region of Cajamarca, with whom we have implemented development projects in crafts.

Products

All our products are handmade. We specialize in woven products on backstrap looms a prehispanic textile technique. We use traditionally Peruvian materials; high quality pima cotton, eco native cotton in natural colors and alpaca.
