Mission Statement

MaskIT LLC is committed to providing a sanitary, discreet, and simple method of disposal for used feminine hygiene items. We strive to provide this practical solution and added daily convenience in an environmentally conscious manner. We hope to use our unique platform to pioneer change and inspire others to create more biodegradable and compostable products. We are driven to create jobs in the USA and stimulate the economy with this new innovative product. MaskIT LLC defines itself by its integrity in business and desire to do good for people, our environment, and for our community.

Environmental Policy

Environmental and ethical concerns are a priority to MaskIT LLC and we aim to conduct our business accordingly. We strive to inspire a greater understanding of nature. We incorporate the latest advancements in the use of natural raw materials to ensure our product is as earth friendly as possible.

MaskIT products are made with a Biofilm that is certified compostable. It is extruded from Mater-bi, which is derived from plant starches, vegetable oils and compostable polymers that can be consumed by microorganisms that live in our soils. Our hope is that our proactive efforts with MaskIT products will pioneer an overall shift in thinking and that someday all feminine products themselves will become compostable so that used feminine items enclosed inside of MaskIT pouches can be safely transported and readily composted. This would keep billions of tampons & pads out of our landfills and make a huge positive impact on the earth. We have developed good and respectful working relationships with our material suppliers and together we are striving to keep MaskIT a consumable product that will not leave behind a harmful ecological footprint.

All of our packaging is made from the most eco-friendly paper available, is printed with soy-based ink, water-based aqueous coatings & is 100% recyclable
