Transparency	Yes	No
Curved/Flexible	Yes	No

Specifications

Battery Runtime: > 30 hrs
Recharge Time: < 2.5 hrs

Luminance: 1000-3000 cd/m²
(Dimmable)

Color Temp: 3000K

Battery Type: Lithium Polymer
Rechargeable

Weight: 7.5 oz (210 g)

Material: PC/ABS & Metal

Rechargeable with a Micro USB Port or Solar for a 30+ hours of light.

About Alkilu

Alkilu was founded in 2013 and is based in Southern California. Our mission is to make OLED products part of everyday life. With the help of leading manufacturers from around the globe, we are currently developing an innovative line of OLED products designed to meet the everyday needs of consumers.

TripLit, the organic light emitting diode (OLED) lamp, is the first affordable consumer product of its kind to hit the market and can travel easily with users anywhere and everywhere. It can be used for multiple outdoor activities, from camping to sporting events and everyday tasks, TripLit has the ability to last over 30 hours with no replacement batteries needed. All users need is a readily available microUSB or **ALKILU's** high efficiency Solar Charger to fully charge TripLit in a few hours.

TripLit's unique user-friendly design won ALKILU the DIY Network's award for Aesthetics at National Hardware Show in March of 2016.

After successfully funding its Kickstarter campaign, where it reached over 45 percent of its initial funding goal in the first 48 hours, **ALKILU** completed mass production and distribution of this high quality, energy- efficient and sustainable portable lamp in Q1 2016. It is currently busy fulfilling high demand online orders directly from www.alkilu.com and thegadgetflow.com.

The **ALKILU** team is focused on creating devices that will have minimum impact on the environment and provide a safer lighting alternative for users by eliminating UV rays; providing the closest thing to natural lighting that won't attract bugs or produce heat, making it safe to touch and usable during all activities. TripLit's built-in hook makes it easy to hang inside tents or on trees, and it can easily be extended or flipped to sit on any surface, for ambient or task lighting. It also comes with three dimming levels for a myriad of different applications - such as a desk lamp or nightlight.
