

CP 2000 CASE-PREP MACHINE

- Eccentric roller bearing drive assembly for greater longevity, force and smoother operation.
- 7 threaded Toolhead stations.
- Increased frame cross section for added rigidity and strength.
- Dual primer pocket swaging system (left and right sides) and larger rod diameter for improved strength and added life.
- Improved indexing system for smoother operation.
- Larger Toolhead washer for increased rigidity.

RL1100

- Eccentric roller bearing drive assembly for greater longevity, force and smoother operation.
- Increased frame cross section for added rigidity and strength.
- Redesigned primer pocket swaging with larger rod diameter for improved strength and added life.
- Improved indexing system for smoother operation.
- Adjustable primer slide stop
- Revised primer station locator (spring tension).
- Larger Toolhead washer for increased rigidity.
