Re: Shot-Week Supplier Showcase Booth #51327

Clean Gun Components in a Fraction of the Time

The Miracleclean® Ultrasonic Gun Cleaning Unit (Booth #51327) packs three ultrasonic cleaning zones into a small footprint powerhouse that cleans, rinses, and inhibits your gun parts in a fraction of the time that it would take by hand.

Microscopic ultrasonic bubbles gently and thoroughly penetrate and remove soils from areas that are almost impossible to reach by other means. Rust, grease, and carbon are blasted off in the clean zone, parts are rinsed in zone two, and the final oil zone uses ultrasonic bubbles to drive a protective oil coating into those same hard to reach places.

Each zone measures 36" X 6" X 6," which is large enough to accommodate most stripped rifles.

The Miracleclean® Gun Cleaning Unit is the newest member of the Miracleclean® family of equipment and chemistries. Miracleclean® Ultrasonics designs and supplies high performance, user-friendly precision cleaning systems, manual and automated nitric and citric passivation lines, manual and automated electro-polish lines, automated penetrant inspection lines, automated titanium anodize lines, chromating and nital etch lines, water-based clear coat lines, and aqueous cleaning, passivating, and anodizing chemistries. ##
