StressVest Continues to Build Momentum After 10 Years in the Industry

There is no stress in the long-term success of laser-based firearm training system

LAS VEGAS, NEVADA – January, 2020 – It has been a decade since StressVest launched as the first non-projectile force on force tactical firearm training system with a pain penalty. In a competitive industry where new companies do not always last, StressVest continues to grow, coming off of their most successful year in 2019.

Rory Bochinski, President of StressVest, says having so many notable clients over the years like the U.S. Secret Service, the U.S Military and Dubai SWAT really helped establish StressVest as a high-end training system worldwide.

“The agencies using the StressVest see for themselves the benefits of a laser based system and they love it. They can train anywhere without cleaning up a big mess after, they don’t need bulky protective equipment, and the pain penalty can be adjusted to suit each individual officers skill level. A lot of agencies really appreciate that kind of freedom,” Bochinski said.

Over the 10 years StressVest has expanded on their original concept by offering new versions and accessories to cater to different agencies specific needs. The StressX Tactical and StressX Elite offer options for SWAT, Special Forces and Military training that will not restrict the operations of their regular equipment. The IED adaptor allows for integration of training IED’s such as the new SimBlast, recently launched by Setcan Corporation.

StressVest has also built mutually beneficial relationships within the firearm training industry. Industry leaders like UTM, SIRT, Dvorak, Laser Ammo and Smart Firearms all have conversion kits and dedicated firearms that integrate with the StressVest system.

“We understand that every agency needs options when it comes to weapons training and our system allows them to find something that equates to what they actually use in the real world,” Bochinski said. “Our goal is to give officers the most realistic training possible so there are no surprises when they get out in the field.”

It is not surprising the StressVest has found a home at Setcan, the world’s largest supplier of reality based training products. Setcan was the company that introduced the Shockknife. Now the industry standard for edged weapon training, the Shockknife provides a physical and mental stimulus of a real knife threat that you can’t find with any other edged weapon training tool.

The StressVest uses the same type of safe shocking pain penalty technology as the Shockknife and you can try them both out for yourself at Shot Show 2020 at booth 7111.
