## New All-In-One Miniature Torque Driver From Fix It Sticks

Chicago, IL- Fix It Sticks, the industry innovator of modular firearms maintenance tools and torque limiters has introduced the **All-In-One** torque driver. Available in a complete kit or individually, the **All-In-One** provides six torque values most commonly used by expert and professional shooters into one compact driver.

Using the **All-In-One** is quick and easy because there are no settings to adjust or hassle with before use. Simply install any 1/4" bit or socket as needed and tighten the fastener until the proper torque is achieved. A precise, graduated torque scale is laser etched on the side to indicate the torque value as it is applied. The settings marked on the side are 15in/lb, 25in/lb, 35in/lb, 45in/lb, 55in/lb and 65in/lb. The **All-In-One** can also be used to apply torque in between the specified settings by watching the in/lb indicator as torque is being applied.

The new **All-In-One** Torque Driver kit comes with the Fix It Sticks T-handle wrench. This wrench works with any 1/4" hex bit and is designed for portability or using either as a standard T-handle, or bits can be inserted into the opposing T-handle ends for more torque. Included with the kit are a 1/2" socket and fifteen 1/4" hex bits commonly used for scope mounts, actions screws and other firearm accessories. The entire kit is contained in a zippered soft carrying case with a molded bit holder designed to securely organize any bit or accessory with a standard 1/4" base, including Fix It Sticks Torque Limiters. The **All In One** Torque Driver works with any 1/4" hex drive or hex bit.

Perfect for use at the range or int the field, the complete **All In One** Torque Driver kit has an MSRP of \$112.00 and the individual **All In One** Torque Driver has an MSRP of \$60.00. Both are now available.

**About Fix It Sticks:** Fix It Sticks is a highly modular multi-tool system featuring a variety of specialty tools and torque limiters, along with standard 1/4" bits, to keep your gear running at the range and in the field.
