

March-F

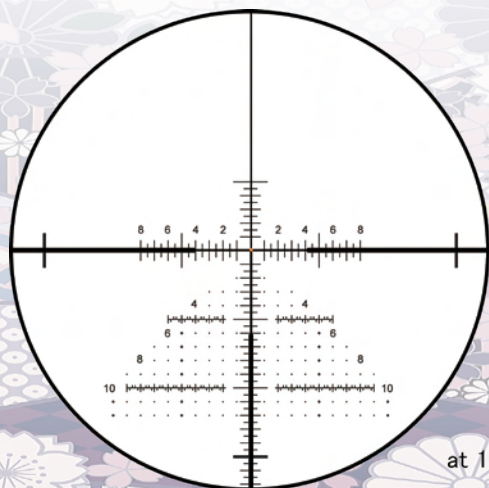

1x-10x24 Shorty
DR-TR1 Reticle

- March-F series
- First Focal Plane
- 30mm Body
- 10 Magnification Ratio
- Dual reticle (FFP+SFP)

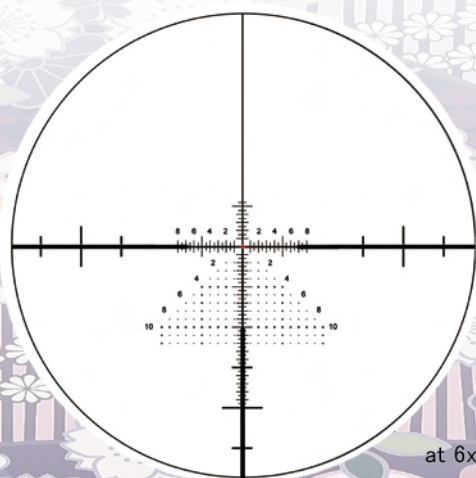

Specification

Magnification Low : 1x
High : 10x
Effective lens diameter(mm) : 24mm
Windage/Elevation turret : 1 click 0.1MIL
1turn 10MIL
Total travel amount : Elevation ± 28 MIL
Windage ± 28 MIL
Elevation turret : 0-set function
Windage turret : -
Illumination model
Illumination : 6 level illumination switch
Eye peice : 19.2 degree angle
fast focus diopter
Body tube : 30mm diameter
Overall length : 214mm/8.4in
Weight : 505g/17.8oz
Reticle : DR-1, DR-TR1
(Dual reticle combining merits of both FFP and SFP)

March-F 1x-10x24 Shorty

March's dual reticle offers the merits of both FFP and SFP reticles to benefit shooters. The tolerances required in assembly of dual reticle is extremely high that very few are able to do it, especially with a 10x zoom ratio. But please be assured that the assembly of this scope, like all our other offerings, is meticulous. We are pushing the limits of the state of the art in reticle design.

Dual reticle has the convenience of the FFP reticle scale which magnifies and reduces according to the magnification and the usability of the SFP reticle with the constant thickness of the line as the magnification changes. The daylight bright fiber dot illumination on the Second Focal plane can be used as a dot sight.
