

Fulghum Industries Receives Second Order from Biewer Lumber

Fulghum Industries is pleased to announce that it received an order from Biewer Lumber for (2) 170' 25 Ton Log Cranes for their second Greenfield sawmill site located in Winona, Mississippi. Biewer Lumber's decision to purchase two additional cranes for their new mill came as no surprise.

“We have been operating the 170' Fulghum Crane for over a year now in our Newton Mill. We have enjoyed the Service and Reliability from Fulghum and the 170' Double Row Crane. Fulghum has done a great job in the design of this Crane. Our operators enjoy the ease of operation and visibility this Crane offers. These factors have led us to purchase 2 of the 170' Double Row Cranes for the Winona Sawmill.” said Dan Bowen, the General Manager of the Newton, Mississippi Mill.

The cranes will be feeding a state-of-the-art mill with the latest optimization technology. The Fulghum Log Cranes are the first pieces of equipment that handles the wood, which is why it's important to invest in reliable, robust, and efficient machinery. Fulghum's Log Cranes have a historical record of handling, unloading, storing, and feeding tree-length logs with minimal downtime. The mill is scheduled to be completed and operational by early 2022.
