Firing Ranges May Be Walking Away From a Fortune in Lead

A typical firing range generates 25,000-500,000 pounds of lead which could be worth a substantial amount because the price of lead is at an all-time high.

Arvada, Colorado – May 20, 2015 According to *Scrap Register*, prices are at <u>all-time highs</u> for heavy metal scrap such as lead. In a recent article, <u>Barron's</u> reports: "Prices of lead are up 18% since March, and now there's talk of limited supplies." This presents a great opportunity for gun ranges to optimize their lead reclamation and clean up their firing range.

Of course, a range can reap further benefits from routine lead reclamation projects.

A clean and well-maintained range will likely attract more customers because shooters will know the range is safe and there will be no chance of ricochet due to lead buildup. It's for these reasons that those who operate a range should seek out an experienced lead reclamation company for routine maintenance and lead reclamation.

Fortunately, a Colorado-based company, MT2, LLC, is leading the effort to unlock the hidden profit from spent lead in firing range soil. In the past year alone, MT2 has reclaimed over 1,000,000 pounds of lead from ranges nationwide including private clubs and law enforcement agencies.

Over the past decade, MT2 has credited over \$4,000,000.00 to range owners from lead recycling on their firing range, while working closely with them to implement firing range Best Management Practices (BMPs) to protect shooters and the environment.

A BMP Program includes removal and recycling of lead bullets and bullet fragments; sampling, analysis and monitoring of soil and groundwater conditions. Utilizing MT2's patented ECOBOND® lead treatment technology, treated soils are considered non-hazardous and can be replaced back onto range berms.

MT2 is the nation's #1 firing range maintenance & lead reclamation company, has never left a job uncompleted and can help you clean your range to unlock the value you have in spent lead.

"We are pleased to offer a free range evaluation for indoor or outdoor ranges." stated James Barthel, MT2 CEO. Range owners needing to request an evaluation can get more information at: http://www.mt2.com/rangequestionnaire
