## COR®BON AMMUNITION INTRODUCES NEW MPR®- MULTI PURPOSE RIFLE AMMUNITION

Sturgis, SD (October 20, 2015) - COR®BON is excited to introduce MPR-Multi Purpose Rifle Ammunition. We believe we found the perfect all-purpose round that will take you from home, to the shooting range and the hunting fields.

The bullets in our NEW MPR features a gilding metal jacket with a specially formulated lead core and a green acetal resin tip. The major advantage of this tip along with its boat tail is to reduce drag, producing extremely high ballistic coefficient. This creates more reliable feeding in magazine fed firearms.

**SELF DEFENSE** • It provides rapid explosive expansion without excessive penetration.

**ON THE SHOOTING RANGE** • Its aerodynamic resin tip offers extreme accuracy at long-range precision competition and it's perfect for 3 gun matches. The resin tip also improves feeding in magazine fed rifles.

**FOR THE HUNTING RANGE** • Unlike open tipped match bullets, the MPR reliably expands for humane kills on varmints and deer size game giving just the RIGHT amount of Penetration.

Due to the high ballistic coefficient, the 308 calibers stay supersonic at over 100 yards.

- Resin tipped to reduce drag and improve ballistic coefficient
- Great for long range hunting -varmints to deer size game
- Superb for long range precision matches and target shooting as well as 3 gun matches
- Perfect as a long range or CQB self-defense round
- Sold in 20 round boxes

COR®BON's NEW MPR®- MULTI PURPOSE RIFLE AMMUNITION

AVAILABLE NOW

# MULTI PURPOSE RIFLE™

MPR™ is a TRUE Multi-Purpose Rifle line. Whether you use it for hunting, target or long range sniper matches, it's the one load that can do it all! MPR™ uses bullets that provide the highest ballistic coefficient in the industry and with its hard hitting extreme expansion it's sure to get the job done right the first time.

NEW PRODUCT

## MPR™ IS THE LOAD THAT DOES IT ALL

Rapid Violent Expansion .

Minimizes over penetration.

Special Resin tip  
increases Ballistic  
Coefficient (Highest  
in the Industry) and  
improves feeding.

Match grade Jackets and  
uniform Boat-tail.

COR@BON AMMUNITION ANNOUNCES ITS NEW URBAN RESPONSE™ PISTOL AMMUNITION in 9mm

Sturgis, SD (October 20, 2015) - COR@BON Ammunition announces a pistol load in its Urban Response™ Series. 9mm Luger+P 100gr Urban Response™. The latest in the Urban Response™ series carries a velocity of 1475fps with 480ft/lbs of energy. The distinctive characteristic of this round is a NEW gilding metal jacket filled with a soft lead core that's formed into a Patented "V" shape. It's then capped with a distinctive BLACK polymer ball which is crimped and held in place by the jacket. The BLACK ball enhances feeding in auto pistols. During bullet flight, the BLACK polymer ball disperses air around the bullet making it more aerodynamic than a conventional hollow point, improving down range ballistics. Upon impact, the BLACK polymer ball delays expansion allowing it to penetrate several inches before it is pushed out of the way exposing the lead "V" shape cavity, causing the bullet to fully expand properly. An added benefit of the BLACK polymer ball is that it protects the integrity of the bullet by not allowing clothing or other material to plug up the cavity causing it to fail to expand. It's paired with COR@BON's new nickel coated case that is specifically engineered for critical components. Dutca Bright 7a®™ coating won't tarnish or flake like other nickel coatings and offers improved visibility for low-light chamber checks and enhanced feeding in all actions. This is the perfect response when evil comes calling to your urban area. Sold in 50 round boxes, with a suggested retail of \$41.64.

It is the perfect companion round to the Urban Response™ Rifle Ammunition. The Urban Response rifle load is offered in 223 Rem/5.56mm 55gr JHP with 2900fps and 1027 ft/lbs. Its soft lead core delivers instant stopping power without over-penetration. This FAST expanding bullet is designed to minimize over penetration and ricochets in urban environments. It uses certified precision Lapua Brass and COR@BON bullets, making it an extremely accurate and consistent load. Sold in a 20 round box with suggested retail of \$30.23 and a 50 round box with suggested retail of \$73.78.

Both Urban Response™ Pistol and Rifle Ammunition were created for defense in populated urban areas. To learn more about COR@BON's Urban Response™ ammunition, visit [www.corbon.com](http://www.corbon.com) or Call -605-347-4544/1- 800-6CORBON

Before Evil comes calling to your URBAN area, fill your MAGS and "GET HOME BAG" with Urban Response. Ammo that will get you to your loved ones.

## INTRODUCING AN ADVANCED ENGINEERED COATING

IMPROVED VISIBILITY FOR LOW-LIGHT CHAMBER CHECKS • ENHANCED CORROSION RESISTANCE • WON'T TARNISH OR FLAKE

COR@BON AMMUNITION IS PROUDLY USING AN ADVANCED ENGINEERED COATING **AVAILABLE NOW**

FOR IMMEDIATE RELEASE:

Contact: Dane Pi  
Dane@corbon.com

COR@BON AMMUNITION IS NOW USING A NEW ADVANCED NICKEL COATING ENGINEERED SPECIFICALLY FOR CRITICAL AMMUNITION COMPONENTS ON THEIR HANDGUN CASES

Sturgis, SD (May 25, 2015) - COR@BON Ammunition is now using a NEW advanced nickel coating on select calibers of their handgun ammunition cases. "For over 33 years in the ammo industry, I could not find a coating to meet our stringent quality control. I refused to compromise our products by inferior nickel plating that often chipped, cracked and peeled away causing more issues than not. Finally, there is a product worthy of bearing COR@BON's seal of approval" said COR@BON CEO, Peter Pi, Sr.

Ducta-Bright 7a™ coating is advanced nickel coating engineered specifically for critical ammunition components. Advantages of Ducta-Bright 7a coating on brass casings is marked improvements in feeding in all actions, enhanced corrosion resistance during extended storage or field exposure, improved visibility for low-light chamber checks, improved cosmetics and ease of clean up during reloading. It also, prevents tarnishing in leather belt pouches and holsters. Now, COR@BON Ammunition will look like the day it was purchased and outperform uncoated brass.

To learn more about COR@BON's advanced nickel coated brass with Ducta-Bright 7A Nickel™, log on to [www.corbon.com](http://www.corbon.com) or call -605-347-4544
