

LaserStar is now serving the firearms industry with our extensive line of laser welding and laser engraving machines. These laser systems can be used to weld broken gun parts, repair porosity and pitting in gun bodies as well as in the repair of many other firearm parts.

Laser engraving can be used for serialization and customization of firearms, which has become a big business in both the manufacturing and retail markets. Especially with the stringent government rules on gun serialization.

Learn more about LaserStar laser systems and how they can help with your firearm business.
