## **Coonan Introduces New 1911 .45 ACP Pistol**

**Blaine, MN** – Coonan Inc., known for their legendary 1911 based .357 Magnum pistols, introduces a new class of 1911 pistols chambered in .45 ACP.

The new .45 ACP pistol raises the 1911 standard by taking the “Coonan Difference” (linkless barrel, pivoting trigger, and external extractor) proven technologies from their 1911 .357 Magnum Auto and applying them to their new .45 ACP.

The linkless barrel is more reliable than linked barrels and offers increased accuracy while virtually eliminating feeding issues. The pivoting trigger’s unique location and motion allows the user a more consistent trigger pull for better accuracy and tighter groups. Every trigger, hammer, sear, and disconnecter are crafted at the Coonan facility in Blaine, Minnesota to their exact specifications. The external extractor is coil spring activated for increased reliability.

This handgun ships standard with fixed black Novak style front and rear sights. Upgrade options include fixed or adjustable white dot sights & fixed or adjustable tritium night sights. This new handgun also incorporates an extended slide catch and thumb lock to ease operation. The Coonan .45 ACP base package includes a 7 round single-stack magazine, a carrying case, FP10 gun oil and a safety lock. For additional information on the Coonan .45 ACP 1911 Pistol, please visit <http://www.coonaninc.com/product/.45-ACP>
