

FOR IMMEDIATE RELEASE

Maxim Defense CQB Stock now shipping

(12/22/2015) St. Cloud, Minnesota – Maxim Defense proudly launches their new CQB stock with extended cheek weld built for a wide array of AR-15 and M16 pattern 5.56 rifles.

The 4-position CQB Stock adds less than 5.5 inches to your AR15 when collapsed and reaches 10 inches when fully extended, roughly the same length as a standard carbine collapsible stock at full extension. By use of a set-screw (included) the operator can preset the stock to expand to any position they prefer, aiding in consistency during rapid deployment. There are no buttons or levers to engage to expand the stock from its collapsed position, making expansion simple and fast, just grab the butt stock and pull.

“The Maxim Defense CQB Stock is simply the most thought out, versatile, and durable CQB stock on the market” says Michael Windfelt of Maxim Defense. Adding to versatility, the Maxim CQB Stock includes an exclusive shortened JP Silent Captured Spring letting the user keep their existing bolt carrier group, an important purchasing decision for many shooters.

Two QD mounts, durable construction, and extremely user-friendly, the Maxim Defense CQB Stock is the perfect choice when creating a compact AR-15.
