New upgrades allow the Elitelron REVOLUTION Bipod™ to run circles around any other bipod in the firearms industry. Booth 20311

Potomac, MT / January 19, 2016 - Elitelron has been researching and developing alternatives to the traditional bipod for years and has been granted Patent #8443540 on their proprietary mount design based upon deep experience of real world tactical demands. The efforts have resulted in the new REVOLUTION Bipod™, the most revolutionary example of superior design, stability, and adaptability in the tactical world today.

The Elitelron REVOLUTION Bipod™ starts with no exposed springs and no cheap stamped parts. The new legs and tube stem are 4140 chrome moly steel. Leg locks are made from 8620 high grade cold rolled steel. Hidden springs are even made from 316 stainless steel. The mount is positioned lower on the bipod so less "weight over mass" can add to more stability. The adjustable, lockable legs are open to an ideal 60° angle for a solid stance. The feet are designed to sit flat and still "grab" rough or slippery surfaces. The bipod attaches very securely to a 1913 milspec rail, spade, or rigid bipod mounts. The all-steel model weighs 2 lbs. A lighter version weighs 1.5 lbs. And the bipod was designed to work with rifles up to .50 caliber BMG. The REVOLUTION Bipod™ allows the shooter to make the most of any shooting position. It maximizes the ability to be more accurate when presented with unusual angles, difficult, rough terrain, or unforgiving environment.

Eitelron's Dale and Kathy Poling and staff can show you all of the great Elitelron products at the 2016 SHOT Show held in Las Vegas from January 19th through the 22nd at the Sands Expo and Convention Center. The SHOT Show is the largest firearms industry trade show in the world with representation from over 100 countries. Elitelron cordially invites attendees to examine and find out more about their sound suppressors, their updated REVOLUTION Bipod™, and other products at Booth 20311.

Eitelron LLC is a designer and manufacturer of weapon systems and sound suppressor solutions headquartered in Potomac, Montana. The company serves professional and serious marksmen who require the highest caliber of performance in military, law enforcement, competitive shooting, and hunting applications.
