Hayesville, North Carolina

Premium Gun Grips now manufacturing UV printed gun grips for many makes and models.

UV Printing refers to a commercial printing process that uses ultraviolet curing technology. Also known as Ultraviolet Printing, the UV Printing process involves special inks that have been formulated to dry quickly when exposed to ultraviolet (UV) light.

“We now have the ability to produce an unlimited number of patterns, colors and pictures on almost any surface.” said Jim Kumas, VP Sales and Marketing. “We can also create one offs and custom runs for customers, all we need is a high def picture.”

Premium Gun Grips is located in Western North Carolina and has been producing grips being sold all over the US, Canada along with other countries.
