PRIMARY ARMS OPTICS AND HOLOSUN RELEASE HS507C-X2 WITH ACSS® Vulcan™ RETICLE

Features Revolutionary, Patent-Pending ACSS Vulcan Reticle for Handguns and Rifles
Uses Intuitive ‘Heads-Up’ Approach to Sight Acquisition and Engagement
Builds on Already-Popular Holosun HS507C-X2 Platform
Priced at \$309.99

HOUSTON, TEXAS – Primary Arms Optics is proud to announce the release of their second co-branded Holosun optic: the HS507C-X2 with ACSS Vulcan reticle [MPN: HS507C-X2-ACSS]. This revolutionary mini-reflex is the first optic to feature the brand-new, patent-pending ACSS Vulcan reticle, which improves user agility and target acquisition through an innovative ‘heads-up’ reticle design. Now available, this optic comes priced at \$309.99, making it one of the best values in the mini-reflex market.

The patent-pending ACSS Vulcan reticle is unlike anything else currently available on the market. The center aiming point is a 10 MOA chevron surrounded by a large outer circle. When looking through the sight at arm’s length, this circle falls outside the optic window. However, if the optic is off center, the circle will show the error and guide the user back to proper alignment. This effectively eliminates the ‘searching’ problem when the aiming point is positioned outside the optic window. The center chevron also provides an infinitely precise point of aim, providing basic holdovers for 9mm, .40S&W, .45ACP, and several common rifle cartridges.

“The ACSS Vulcan is a revolutionary concept,” says Dimitri Mikroulis, Creator of the ACSS Reticle System. “It solves issues faced by common pistol sights while providing unmatched capabilities with increased accuracy, speed and situational awareness.”

While the new optic boasts several advancements and innovations, its price at \$309.99 makes it one of the most affordable mini-reflex sights available, appealing to any budget. Core features of this optic are the same as other HS507C-X2 models, including its Solar failsafe, shake-awake technology, durable construction, and RMR-compatible footprint. In addition, the multiple reticle system controls allow the user to deactivate the outer circle at their preference, so users enjoy additional customization to their preference. For more information or to order this optic, visit the [product page](#) on primaryarms.com, or shop through your favored Primary Arms Optics retailer.
