Zeta6 EDC Offset Speedstrip for 5-Shot J-Frame Revolvers

Gainesville, GA - Zeta Industries is please to introduce the Zeta6™ J-PAK™, an offset speedstrip that loads 3 and 2 in 5-shot J-frame revolvers chambered in 38SP/357.

Traditional speedstrips load a 5-shot revolver in a 2-2-1 sequence. With J-PAK™, the familiar speedstrip design has been offset slightly to load in a 3-2 sequence, loading three rounds in the first motion. Its narrow profile makes it great for concealed pocket carry. The thin, flexible material

allows the cartridges to flex and conform when in a pocket yet align the rounds perfectly when reloading a revolver. And like the K-PAK™, two J-PAKs can be nested together to carry ten rounds in a little more space than only five. This is the fourth speedloader product in the Zeta6 brand for 5-shot J-frames. www.zetasix.com

"Our goal was to design a narrow, EDC/pants-pocket speedloader that offered advantages over conventional speedstrips, and could still be carried discreetly.", says designer Michael Lyle. "The commercial success of our first offset strip, K-PAK™, resulted in substantial customer feedback asking for a J-frame version. During the design process, we learned that by adding an extra sixth socket we could make the product ambidextrous.", continues Michael Lyle. "Depending on which of the two middle sockets are left empty, the user can configure J-PAK for either left- or right-hand use. And the empty middle socket creates a finger gap that can be used for added stability."

The Zeta6™ J-PAK™ works perfectly with all 5-shot J-frame size revolvers chambered in 38 Special and 357 Magnum.

J-PAK™ is sold in 2-pack packaging and retails for \$11.95. J-PAK™ is available now on the zetasix.com website. Dealer and distributor inquiries are welcomed.
