

## Two New EDC Speedloaders for 6-Shot K-Frame Revolvers

The revolver remains one of the more trusted pieces of hardware for concealed carry. But keeping the cylinder fed remains a challenge. To help keep your revolver loaded, Zeta Industries introduces two new speedloaders for K-frame size revolvers. The hexagon shaped K-CLIP™ speedloader and the trapezoid shaped K-PAK™ offset speedstrip. [zetasix.com](http://zetasix.com)

[Zeta6™ K-CLIP™](http://zetasix.com) is a hexagon shaped speedloader that arranges all six rounds in a circular pattern for fast reloading. Unlike traditional rigid speedloaders, K-CLIP is small - as small as one can make a one-shot speedloader, with no knobs or buttons, making it great for everyday carry. The thin, flexible polyethylene material allows the cartridges to flex and conform when in a pocket yet align the rounds perfectly when reloading the revolver.

"K-CLIP is modeled after our popular J-CLIP™ but redesigned for 6-shot D- and K-frame size revolvers" says Michael Lyle, product designer. "As with our popular J-CLIP, we want to offer the smallest and most comfortable EDC speedloader product for one-step reloading. With the recent reintroduction of medium-frame, 6-shot revolvers like the Kimber K6s, Colt Cobra/King Cobra, and the Taurus 856 as EDC defensive-carry options, we are endeavoring to provide better reload solutions than is currently available in the marketplace."

[Zeta6™ K-PAK™](http://zetasix.com) is a trapezoid shaped speedloader that arranges six rounds into two equal three-round arcs. Unlike traditional rigid speedloaders, K-PAK is narrow and flexible, allowing comfortable concealed carry in any pocket.

"The inspiration for this design was the moon clip, used since the early 20th century to quickly reload revolvers.", continues Lyle. "We wanted to make a speedloader completely symmetrical, so the user would not have to think about orientation. For this reason, we pointed the two half-round moon clip patterns in opposite directions creating something that we call an offset speedstrip."

Both K-CLIP and K-PAK work well in 6-shot, K-frame revolvers chambered in .38 SP/.357 Magnum including Smith and Wesson, Kimber, Taurus, and D-frame Colt models. Both speedloaders come in 2-packs and retail for \$11.95.
