FOR IMMEDIATE RELEASE

Polymer80 AFT Kit Designed for the Home Handgun Builder

DAYTON, Nev. (Nov. 1, 2021) — If you always wanted to build your own high-quality handgun but were unsure of how to get started, Polymer80 (P80) has a solution: the Polymer80 AFT Kit. Designed with the home builder in mind, AFT stands for Assemble for Thyself. The P80 AFT Kit contains all the necessary components to build a complete, serialized PFS9 or PFC9 pistol quickly and easily.

The new Polymer80 AFT Kit includes everything needed to build a fully operational firearm: a serialized pistol frame, complete pistol frame parts kit, complete slide assembly, Locking Block Rail System™ & Rear Rail Module™, magazine, and a hard-sided black pistol case. The Polymer80 PFS9 and PFC9 pistols are loaded with features from top to bottom for comfort, ease of operation and peak performance. Each pistol offers next generation ergonomics, high-strength reinforcement, polymer construction, Picatinny accessory rail, double undercut trigger guard, extended beavertail, right & left thumb rail, 1911 grip angle, and PTFX™ texture pattern.

The Polymer80 AFT Kit is fully customizable, so you can easily make changes to suit your individual needs. It's also designed to be very "user friendly," even for those who are not experienced gun builders. They come pre-drilled, therefore no hand tools are required. For

those who prefer to build a complete, serialized firearm, the new Polymer AFT Kit is the one for you.

“The popularity of building your own firearm continues to grow exponentially,” said Loran Kelley, Polymer80’s founder and CEO. “We have had customer requests for a kit that offers a little less work and a serial number. We are happy to comply with our customer requests. The AFT Kit provides them with an easy way to build their own high-quality handgun from the ground up, which meets their requirements and still creates a tremendous sense of pride in their completed firearm. It’s one more example of our company motto, ‘Engage Your Freedom.’” The company offers its customers a wide array of build components, from 80 percent pistol frame kits, AR parts & magazines, pistol barrels, slides, pistol parts kits, pistol magwells, holsters, and more, as well as completed PF-Series handguns.
