BOARBUSTER SHADOW

PEDERSOLI BOARBUSTER SET TO SHINE

Historical firearm experts, Pedersoli, is excited by the new generation of Boarbuster rifles it has created. *Gun Trade World* looks at the selling points of the new releases.

The new generation of lever action rifles called BOARBUSTER originates

from experience gained in the last decade and from the continuous feedback relationship with our customers.

Further, having renewed the rifles' aesthetic, Pedersoli is committed to making its rifles even more functional, resistant, and applicable to the modern concept of hunting. Stocks with an optimised profile, increased loading levers, resistant and water-repellent covers, barrels that can be equipped with stabilisation and noise

suppressor systems and the possibility of using the most modern optic aiming systems.

INNOVATIVE ELEMENT: Loading Lever with Interchangeable "Loop"

The company developed and patented a new loading lever, which designed to enable interchange of the ordinary lever loop with one having larger dimensions, easily done by the user, without special tools. Specifically, designed for users who wear protective gloves. The upper part of the lever remains fitted to the rifle mechanism, while the lower loop section of

the lever can be removed and replaced, keeping the mechanism, precise and solid, as you find in the traditional lever.

Stock and Forend protected by Silicon Grip

When the rifle is equipped with walnut stock, an innovative product is applied to the surface called "Silicon Grip". It is almost invisible yet still shows the natural beauty of the walnut. This special product offers a warmer touch and a firm grip. The protective film is waterproof and scratch resistant in a superior manner than normal camo films on the market can

offer. The firm grip effect increases with humidity or hand sweating.

Frame drilled and tapped to fit the scope at the left side. To avoid limiting the use of optics with normal focus, imposed by the mechanical characteristics of the 86/71 model, the company has developed a special Picatinny base which can be fitted to the left side of the frame, the displacement is 4cm/1.778in from the central axis of the barrel, enabling the fitting of most optics available on the market, allowing ideal extraction of the shells.

The frame of all the Boarbuster models will be

DAVIDE PEDERSOLI

drilled and tapped for the scope base.

Stock and Forend
with improved profile
The stock, compared to the current model, will feature a less accentuated grip, enabling a more natural movement of the arm while loading.

The comb is higher by about 1cm (393in) for quicker alignment of the eye with the rifle's sights.

The forend has been made thicker to have nicer proportions for the rifle's dimensions and to improve the hand grip.

BOARBUSTER SHADOW (CODE : S 735)

Rifle model characterised by modern finishes and innovative materials. The stock, made of techno polymer, allows both vertical and horizontal adjustment. Equipped with the oversized loading lever and the dedicated Ghost sight mounted on the bolt.

- Pistol grip stock and forend made of techno polymer
- Stock with adjustable

cheek piece in elevation and laterally

- Microcell butt plate
- Frame drilled and tapped on the left side to fit the specific Picatinny scope base (036U232000)
- Loading Lever with extra-large oversize loop
- Bolt equipped the specific Ghost sight (036U42200L)
- Barrel drilled and tapped to fit the Picatinny/Weaver scope base (036U228000)
- Threaded muzzle
- Safety at the hammer
- Magazine capacity: 5 rounds
- Barrel length: 483 mm
- Weight: 3,500g
- Calibre: 45/70 GVT

BOARBUSTER EVOLUTION (CODE : S 734)

Classic rifle model aesthetically refined and with a rich equipment. Interchangeable loop loading lever, stock in selected walnut, protected by the special Silicon Grip film, action coated with Cerakote finish.

- Silicon Grip coated stock and forend
- Microcell butt plate

- Frame Cerakote coated
- Barrel equipped with the Picatinny/Weaver scope base with integrated rear sight and the ramp front sight
- Frame drilled and tapped on the left side to fit the specific Picatinny scope base (036U232000)
- Loading Lever with interchangeable loop
- Bolt drilled and tapped to fit the specific Ghost sight (036U42200L)
- Threaded muzzle
- Safety at the hammer
- Magazine capacity: 5 rounds
- Barrel length: 483mm
- Weight: 3,650g
- Calibre: 45/70 GVT

About

Since Davide Pedersoli celebrated its first birthday in the spring of 1958, more than sixty years have passed, YEARS of continuous success: the recurring records and the large number of medals won in various international sport competitions, testify to the perfection and ballistic precision of Pedersoli guns, features that made them

popular among target shooters and hunters worldwide. Davide Pedersoli has always distinguished itself by their historical research of the guns to reproduce, to identify some of the most important steps in the gun manufacturing tradition of eighteenth and nineteenth centuries European and American firearms. A rewarding choice that has allowed us to relive epic pages and, with the passage of time, believe in a real lifestyle and promote every aspect of it. A rewarding choice that allowed many new enthusiasts to relive epic pages of history and, over time, to believe in a genuine way of life to be promoted in every aspect. The company has also developed a strong bond with "re-enactment" groups, an area in which scholars and collectors always show the utmost attention to detail and to the faithful historical reproduction of various models.
