

Rifle Enhancement Technologies

by Advanced Nitriding Solutions

SteamOX is a controlled oxidization of parts for improving corrosion resistance. Has a black matte finish. Is not a coating. Does not chip or flake. Application: Carriers, Bolts, Barrel Extensions

ProWear is a gas diffusion treatment that doubles barrel life, improves corrosion and fatigue resistance. An environmentally friendly process compared to Salt Bath Nitriding, QPQ, or Chrome Plating. Low temperature process. Improves Barrel fatigue life and shooting accuracy. Application: Barrel, Barrel Extension, Slide

Duo-Phase is our newest Rifle Barrel Enhancement Technology. Specialty surface enhancement techniques to improved mechanical properties, and enhance Barrel ID surface/rifling properties. Improves accuracy, extends Barrel life (up to double). Improves muzzle velocity. Application: Barrel
