

THE REDCAT

FOR IMMEDIATE RELEASE

ATTENTION MANUFACTURERS:

We're looking for a strong company to license and bring the patented REDCAT to market!

What's the REDCAT? It's a device that drops into the AR lower allowing dry fire training without having to rack the bolt to release the safety selector.

Why REDCAT: RED for safety; also RED = Remember Everyone Deployed
CAT = Critical Associative Training

Why Critical Associative Training? Proper sequencing creates good muscle memory.

Dry firing with the REDCAT is just like the real world: Disengage the safety as you bring the rifle to bear on the target(s). Engage the target(s). Re-engage the safety as you lower the rifle. Repeat as necessary until all targets are neutralized.

Dry firing without the REDCAT creates poor habits: Disengage the safety as you bring the rifle to bear on the target(s). Engage the target(s). STOP...you must rack the bolt to unlock the safety selector. Re-engage the safety and try to pick up where you left off.

Repeated improper sequencing can cause disqualification from a competition or a negligent discharge during mission execution.

The REDCAT is a simple, cost-effective game changer for the DoD, law enforcement, competition and civilian AR communities. Save ammo and take your proficiency to the next level!
