Principal Manufacturing Corporation is a fineblanking, precision metal stamping, and assemblies Company that is privately held with a succession plan. We operate from our 166,000 square foot IATF and ISO14001 facility in Broadview, IL and ship globally including to several companies in China.

PMC offers **speed to market** through in house tooling, **engineering assistance** to take cost out before you tool and **completed parts** through whatever operations are required. We offer fineblanking to 700 tons, precision metal stamping to 400 tons, double disc grinding, CNC machining, spot, projection and robotic mig welding, insert molding and in house automation to ensure competitiveness.

As an essential company during the pandemic, PMC upgraded our wire EDM machines and conventional EDM machine while also adding a Swiss screw machine, waterjet machine and a new 250-ton fineblank press which is the fastest we have owned. We are poised for the next growth wave and seek to continue growing our market share while delivering quality, service, and attention to detail.

Let us show you what we can do.
