

VirTra M4 Rifle Recoil Kits Now Available for Law Enforcement and Military Clients

CHANDLER, Ariz. — January 17, 2023 — [VirTra, Inc. \(NASDAQ: VTSI\)](#) (“VirTra”), a global provider of judgmental use of force training simulators and firearms training simulators for the law enforcement and military markets, has again engineered a tetherless drop-in recoil kit for M4 rifles. They are designed to convert real firearms with no weapon modification required, allowing a duty weapon to go from live to simulator-ready within minutes with a simple exchange of the barrel. The recoil kits operate with liquid CO2 magazines to provide the most realistic recoil on the market within a simulated environment without the limitations of a cord or tether.

M4 recoil kits allow an officer or warfighter the ability to use their own rifle in their VirTra simulator. This maximizes skill transfer as the student is training in a similar manner to the way they would perform on the field. They can be used in all VirTra suites and in either scenarios or marksmanship ranges.

VirTra’s recoil kits are manufactured in the company’s own CNC machine shop in Arizona, never sourcing from overseas. Using ArmorGen® DLC coating that maximizes longevity and durability. Black nitride coating over a carbon steel body ensures that the product will not corrode as well as reduces the need for lubrication.

M4 recoil kits as well as recoil kits for many other weapons are used by VirTra clients not only around the United States, but in 40 countries worldwide for training. Instructors have noted positive experiences using VirTra’s recoil kits due to their transferability to a real-life setting, including a live fire range.
