VercO Shield Technology

After years of DoD-supported development, we are pleased to offer a unique, rifle protection shield system for US law enforcement.

VercO B₄C™ is the lightest and highest hardness armor strike-face ceramic.

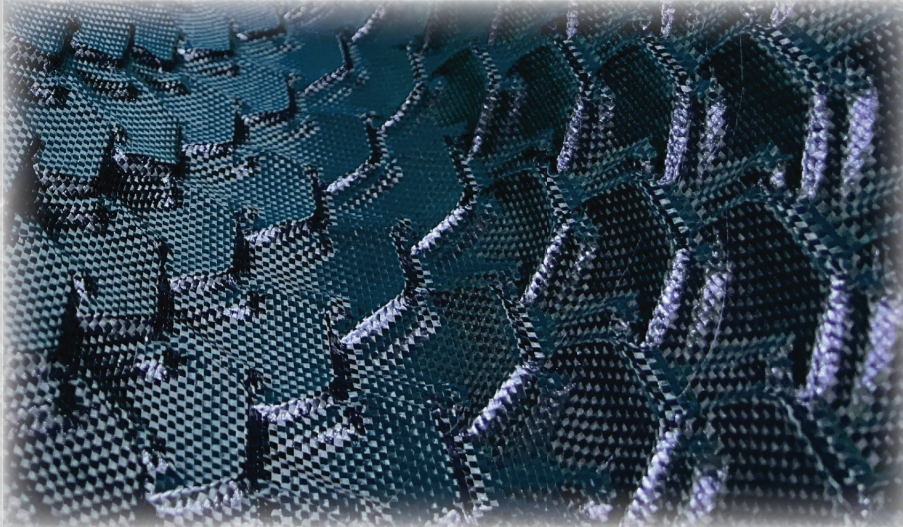

Patent pending

The design of the tile protects against oblique perforations between tiles.

Patented carbon fiber-wrapped VercO B₄C™; the confinement enhances energy absorption.

VercO's containment system allows the tile assembly to roll for compact storage, and then deploy back to its precise imbricated pattern.

Patent pending

Ballistics

Free-hanging 18" x 24" shield was ballistically tested against rifle rounds: *no perforations*.

Five rounds each panel, targeting potential weak spots. Standard muzzle velocities. Testing at NTS Wichita based on the NIJ 0108.01 standard. Fatigue test involved rolling and unrolling the shield 300 times before ballistic testing.

	M855	M43(MSC)	M80	Fatigue test then M80
Stops	5/5	5/5	5/5	5/5
