

Description: AIM's POS Business Software includes station reservation functionality in the base package. The system supports station groups, so you can categorize range types like indoor or outdoor, west side or east side. Setup your stations/lanes, capture wait lists and setup rates for members, guests and non-members. After the basics are covered your business can enhance AIM's station reservations by adding the Range Reservation service, with this Active-e service you can build your own online solution, or you can connect through the pre-built online range reservations developed by our partners at Vortx. Use the AIM settings to allow for members and/or non-members to reserve times online. Set number of days in advance to book for non-members, and/or based on membership levels. Give your members the opportunity to reserve their lanes online. Streamline your process today!
