SHOT DEFENDER

You make ballistic protection, we'll make it better.

ELEVATING DEFENCE

Shot Defender™, a two part polyurethane cast resin, has exceptional ballistic resistance, offering protection against a wide range of projectiles. When used as a standalone solution, this resin effectively neutralizes threats from handguns. However, its true potential is unlocked when integrated with complementary defense systems, such as Dyneema, Kevlar, or ceramics. Maximize the effectiveness of your defense system by integrating Shot defender.

POLYURETHANE ELASTOMER RESIN CHEMISTRY

Polyurethane chemistry enhances the effectiveness of Shot Defender™ by providing a lightweight yet robust addition to existing ballistic systems, significantly improving their stopping power. Polyurethanes are known for their versatility and can be engineered to possess excellent mechanical properties such as high tear resistance, impact resistance, and flexibility, making them ideal for ballistic applications.
