

NEW Lachaussée

New Lachaussée innovates in fine mechanics and pyrotechnics since 1830.

With a long heritage, Lachaussée has etched its mark as a definitive source for **state-of-the-art machinery** and expertise that redefine industry standards.

We design and manufacture **quality machinery** and equipment to produce small arms ammunition, medium calibers, primers, energetic material, military igniters and detonators.

We ourselves do not manufacture or sell ammunition, primers, detonators, or pyrotechnic compositions.

But thanks to our long tradition in the industry and our **strong process know how** we have the expertise you need!

By providing enriched training sessions on site, we're also committed to **teaching your staff** to install, adjust, operate and maintain the machines.

We also welcome any request for production of non-standard metallic and pyrotechnic devices. Rest assured our **Research and Development department** will carefully examine each inquiry and design a tailored made solution to meet your particular need.

Our equipment meets the **NATO, US and other military standard and specifications.**

Our strength also lies in technology transfer, facility layout, worldwide support, long-term assistance and **turnkey solution.**

99% of our production and expertise is exported **all around the world**, in full compliance and transparency with Belgian export legislation.

AMMUNITION LINES

- Machinery for the production of cups, cases, bullets and projectiles, cartridges.
- 9mm, 7.62mm, 5.56mm, .22, .50, medium calibre,...

PRIMING AND PYROTECHNIC LINES

- Complete set of machinery for the manufacture of primers.
- Equipment for the manufacture of energetic material: primary explosive, incendiary, tracer compositions,...

DETONATOR LINES

- Machinery for the production of various type of detonators and igniters for defence industries: metallic production, loading and assembly, quality inspection,...
