

MC ARMOR INTRODUCES FIRST FULLY FEMALE-CERTIFIED BALLISTIC PROTECTION AT SHOT SHOW 2027

Las Vegas, NV — January 23, 2027. MC Armor, the global leader in personal ballistic protection and lifestyle armor, unveils a historic innovation at SHOT Show 2027: the first NIJ-certified ballistic protection system engineered specifically for women's anatomy.

Unlike conventional unisex vests adapted for female officers and civilians, MC Armor's Female Certified Protection line was designed from the ground up through years of anthropometric research, 3D body scanning, and user field testing.

"This is not a vest made smaller or reshaped — it's a completely new ballistic architecture built for the female body," said Miguel Caballero, founder and CEO of MC Armor. "It offers the same protection with greater comfort, mobility, and confidence."

The collection includes concealable vests, tactical systems, and civilian wearables, all tested and certified under NIJ 0101.07 standards with panels contoured to female torso geometry. Each design delivers uniform coverage, reduced trauma backface deformation, and pressure balance, allowing long-term use without compromise in protection.

The Female Certified Protection Program aligns with MC Armor's mission of saving lives with innovation, style, and inclusivity, providing women in law enforcement, military, and civilian life with body armor made for them — not adapted to them.

MC Armor will showcase live demonstrations and fitting sessions throughout SHOT Show at Booth #XXXX, offering visitors an exclusive first look at the future of female ballistic protection.
