

FOR IMMEDIATE RELEASE

THE END OF RE-ZEROING: MAGNE-TECH SOLVES THE OLDEST OPTICS SWAP HEADACHE WITH MAGNETIC PRECISION

LAS VEGAS, NV – (January 20, 2026) –

Magne-Tech, an innovator in firearm mounting technology, today unveiled their **Magnetic Scope Mount** at the 2026 SHOT Show, offering a revolutionary solution to a universal problem: the time, cost, and complexity of swapping optics. Shooters no longer have to deal with torque specs, witness marks, or the wasted ammunition from re-zeroing when moving between scopes in the field.

Every shooter understands the tedious process: whether swapping a daylight optic for a thermal imager or moving a scope between rifles, the process means pulling out a torque wrench, carefully loosening levers, re-mounting, and firing test groups to verify zero. Magne-Tech has eliminated this friction.

The **Magnetic Scope Mount** utilizes a patented, ultra-strong rare-earth magnetic interface paired with their patented dual-redundant mechanical lock. The result is a system that allows users to detach and re-attach any optic—from day scope to thermal—in under a second, with **zero tools required**.

“We built this for everyone who’s spent too much time and money re-zeroing their rifle after removing their optic,” said Joel Jacobson, Founder & CEO of Magne-Tech. “This isn't just about being fast; it’s about making precision repeatable and effortless.”

Precision Without the Procedure

The magnetic mount delivers confidence under pressure:

- **INSTANT, TOOL-FREE SWAPS:** Transition seamlessly between thermal, night, or day scopes in any condition.

- **GUARANTEED RTZ:** The system is proven to return to zero **within 0.25 MOA** after every swap, saving costly ammunition and valuable time.
- **RUGGED PERFORMANCE:** Machined from **7075-T6 billet aluminum** with MIL-SPEC hard-coat anodizing, the mount is recoil-rated for calibers up to **.50 BMG** and is built to mil-spec durability standards.

The Magne-Tech Magnetic Scope Mount Set is available immediately in 1-inch, 30mm, and 34mm ring sizes. Attendees are invited to experience the instant, headache-free zero at the Magne-Tech Booth **#41050**.

About Magne-Tech

Magne-Tech is a U.S.-based technology company dedicated to developing innovative magnetic mounting solutions for the firearm, hunting, and tactical industries. Committed to superior quality and engineering, Magne-Tech products are designed to maximize versatility and performance for the most demanding users.
