

WHAT IS THE PORTACENTER

The PORTACENTER is the **revolutionary Machining Center with 3 independent spindles** that lets you work on 3 parts simultaneously, reducing cycle time and **increasing productivity by 300%**. Thanks to fast changeovers and large tooling capacity, you can quickly switch from one component to another with ease. Experience the **efficiency and simplicity** of a truly unconventional Machining Center.

The **3 independent spindles** machine 3 parts simultaneously in only 1 process. A fourth station is reserved for loading/unloading during masked time, so **production never stops**. You get the productivity of a transfer machine combined with the flexibility of a machining center.
