

V.ONE Introduces Smart Trigger Gun Lock as Demand for Child-Proof Gun Safety Solutions Continues to Rise

Las Vegas, NV – SHOT Show 2026 — As conversations around responsible gun ownership and child safety continue to intensify across the United States, V.ONE is unveiling its newest innovation — the **Smart Trigger Gun Lock**, a biometric security device designed to help prevent unauthorized access while maintaining instant availability for gun owners.

Recent national discussions have highlighted a growing concern: more families are seeking practical ways to secure firearms at home without slowing down emergency access. Numerous safety advocates and community organizations have noted that many accidental incidents involving minors occur when unsecured guns are stored within reach. As a result, the demand for smart, easy-to-use safety devices has been steadily increasing across the country.

“Parents and responsible gun owners are asking for solutions that protect their families without compromising readiness,” said the **V.ONE Technology LTD CEO**. “The Smart Trigger Gun Lock was engineered to meet that need — combining speed, control, and peace of mind into a single, practical device.”

The **V.ONE Smart Trigger Gun Lock** uses biometric fingerprint technology to ensure that only authorized users can unlock the device. Unlike traditional locks that rely on keys or numeric combinations, the biometric system enables **rapid access in low-visibility environments**, such as bedrooms at night when lighting and reaction time are limited. This helps reduce the likelihood of minors or unauthorized individuals handling a loaded firearm — a concern that has become increasingly prominent as more households adopt at-hand personal-defense setups.

In addition to biometric security, the Smart Trigger Gun Lock incorporates optional alert features and a rugged, durable structure designed for everyday use. This blend of convenience and safety reflects a broader industry shift toward integrating smart technology into the tools gun owners rely on for secure storage.

“We believe safety technology should work with the realities of daily life,” the company CEO added. “Whether someone has children at home, stores equipment in shared spaces, or simply wants a higher security standard, smart locking devices add meaningful protection.”

V.ONE will showcase live demonstrations of the Smart Trigger Gun Lock at **SHOT Show 2026, Booth #42042**, alongside new smart safety accessories designed for homes, vehicles, and outdoor environments.

About V.ONE SAFE

V.ONE is an innovative technology company dedicated to creating advanced smart gun locks and gun-safety accessories. Through original design and precision manufacturing, the company aims to deliver intelligent security products that help gun owners protect their families while maintaining fast access during critical moments.
