

VY Optoelectronics Co., Ltd. specialized in manufacturing kinds of optical precision element and lens. Through many years' hard work and positive innovation, we have become a optical company integrating lens design, production and sales.

Our company has strong production capacity, in possession of the domestically top production line and excellent workers, they are experienced and could produce wide range of lenses; in addition, the VY design group develops world-class optomechanical and mechatronics systems for customer needs in the fields of Space and Scientific Instrumentation and the Semiconductor Industry.

We push the limits of technology, to stimulate industry and enable scientific discovery. Application of our items are very extensive and involves in military, aerospace, industry, scientific, medical instrument, photoelectric device, optical communication and mechanical equipment and so on. Over the years, with the concept of “ integrity, innovation, quality first “, we constantly provide our clients with the best products and perfect service, sincerely welcome domestic and foreign customers to establish cooperation with us, creating a bright future in optical field!

VY Optoelectronics Co., Ltd. specializes in optical lens design, precision manufacturing, assembly, and tuning. With years of expertise and proven solutions, we provide customers with end-to-end optical services – from initial design to mass production.

Our core capabilities include:

- High-resolution optical lens development
- Customized imaging solutions for diverse applications
- Advanced optical processing and coating technologies
- Professional assembly, adjustment, and testing services

From high-resolution imaging lenses to tailor-made optical systems, we deliver innovative, reliable, and cost-effective solutions trusted by global customers.
