

Audacious Concept Expands Its EDC Tool Line with Precision-Made Modular Screwdriver Systems

Audacious Concept continues to expand its lineup of precision EDC tools with its modular **Knife Tool screwdriver systems**, developed specifically for knife maintenance and everyday mechanical tasks.

Machined from premium materials such as titanium, brass, and Ultem, Audacious Concept tools are designed to be compact, durable, and genuinely useful. The modular architecture allows compatibility with standard Wiha bits, ensuring versatility without proprietary limitations.

Each tool is engineered with a strong magnetic bit retention system, moisture protection, and ergonomics optimized for controlled torque in compact form factors. The result is a screwdriver that fits naturally into an EDC setup rather than a toolbox.

Audacious Concept focuses on tools that solve real problems for knife users, collectors, and professionals - combining clean industrial design with practical engineering.

All products are designed by Audacious Concept and produced in limited batches with strict quality control.
